SUMMARY

Data Analyst skilled in Python (pandas, NumPy, scikit-learn), data cleaning, visualization, and predictive modeling. Experienced with Jupyter / Google Colab environments for interactive analysis. Working knowledge of Excel for data cleaning and reporting. Background in architectural drafting adds precision in documentation and analytical rigor. Seeking an entry-level data analyst role.

TECHNICAL SKILLS

Languages / Tools:

Python, Google Colab / Jupyter, Git / GitHub (basic), Excel (intermediate), SQL (basic), TensorFlow (basic), Matplotlib, Seaborn

Python Libraries:

pandas, NumPy, scikit-learn, statsmodels

Techniques & Concepts:

Data Cleaning / EDA, Feature Engineering, Model Selection, Cross-Validation, SMOTE, Random Forest, Gradient Boosting

Currently Learning:

Deep Learning with Keras & TensorFlow (LSTM for time-series forecasting)

PROJECTS

Walmart Sales Forecasting (Time Series & ML) — Python, pandas, scikit-learn

Developed a forecasting model for weekly sales across 45 stores using features such as CPI, Unemployment, Fuel Price, and Holiday indicators.

Compared tree-based and statistical models (Random Forest, Gradient Boosting, ARIMA) with 5-fold cross-validation; tuned hyperparameters and visualized store-level performance.

Result: Random Forest achieved the best performance, highlighting strong holiday sales effects.

Repo: github.com/username/walmart-sales-forecasting

HR Attrition Prediction (Classification) — Python, scikit-learn

Cleaned and explored an HR dataset; addressed class imbalance using SMOTE and engineered key features.

Built and evaluated Logistic Regression, Random Forest, and Gradient Boosting models with 5-fold cross-validation.

Produced interpretable results using feature importance and ROC-AUC visualizations to identify key drivers of employee turnover.

Repo: github.com/username/hr-attrition

Housing Prices EDA & Baseline Modeling — Python, pandas, seaborn

Performed exploratory data analysis (EDA) on housing data to identify factors influencing price (square footage, year built/renovated, waterfront views, etc.).

Developed baseline regression models (Linear, ElasticNet) with K-fold validation and documented findings in a clear, reproducible notebook.

Visualized relationships using Seaborn and summarized actionable insights for pricing trends.

Repo: github.com/username/housing-eda

EXPERIENCE (Selected)

ISLD Business & Marketing Plans and Design — Los Angeles, CA

Drafter/Designer (Project-based)

Produced detailed architectural drawings and documentation; coordinated plan-check corrections and code notes (CRC/CBC/Title 24).

Managed data-like tasks: structured measurements, version control of drawings, and quality checks—transferable to analytics workflows.

EDUCATION & CERTIFICATES

Data Science with Python — Simplilearn (with IBM acknowledgment)

Manual Software Testing + Agile with Jira (e-Commerce Project)

B.A., Arts — Netherlands

SELECTED COURSEWORK: Machine Learning, Deep Learning (Keras/TensorFlow), Data Visualization, Statistics
